MECH part 2

TECH STACK:

- 1) HTML was used to design the basic framework of the website.
 - 2) CSS was used to add design elements to the webpages.
 - 3) JS was used to add in -page effects to the website.
 - 4) A Google Form was used to accept login values from user ,because of lack of knowledge about backend.
 - 5) GitHub was used to finally Host the website.
- 

Features incorporated in the website: ✓

- [Links, and Hyperlinks](#) were added to main Webpage to make the website and webpages more interactive.
- [Notification & Like](#) buttons show changes when clicked.
- There's a [Share page](#) to Share the link of the desired product to friends and family members.
- All items have 4 pics which can be seen by clicking the [prev and next icons](#) or by [simple dragging](#).
- [Help Page](#) was added and mail address was [linked to](#) my mail id.
- [Load More button](#) was provided to search for more items in the inventory of the main page.
- [Login and Logout pages](#) were added for more fun.
